

****Software Requirements Specification (SRS)****

****Hospital Insurance Claims Management System****

****Version:** 1.0**

****Date:** 15 May 2026**

****Prepared for:** Rohit More, Hospital Administration**

1. Introduction

1.1 Purpose

The purpose of this document is to define the functional and non-functional requirements for a ****Hospital Insurance Claims Management System****. The system will automate and streamline the end-to-end management of Cashless and Reimbursement insurance claims, reducing manual tracking, errors, and delays while providing complete visibility and professional reporting.

1.2 Scope

****In Scope:****

- Role-based user management (Super Admin, Admin, Staff).
- Centralized tracking of Cashless and Reimbursement claims.
- Complete workflow from patient registration to claim closure.
- Management of multiple insurance companies and their procedures.
- Patient deposit tracking and refund management.
- Department-wise settlement (Pharmacy, Laboratory, Radiology, and others).
- Automated alerts and dashboard monitoring.
- Comprehensive PDF (hospital-branded) and Excel reports.

****Out of Scope:****

- Integration with external insurance company portals or APIs.
- Patient-facing portal.
- External communication gateways (WhatsApp, SMS).
- Billing / Hospital Management System integration.
- Accounting / ERP system integration.

2. Definitions and Acronyms

Term	Definition
-----	-----
Pre-Auth	Pre-Authorization request sent to insurance company
TPA	Third Party Administrator
TDS	Tax Deducted at Source
Cashless Claim	Claim where insurance company pays directly to hospital
Reimbursement	Claim where patient pays hospital and seeks refund from insurance

3. User Roles and Permissions

Role	Permissions
------	-------------

----- -----	
Super Admin	Full system access, user management, master data, report configuration
Admin	Claim oversight, approvals, reports, alerts monitoring
Staff	Data entry, claim processing, document upload, status updates (as per assigned rights)

Roles are expandable.

4. Functional Requirements

4.1 Master Modules

- ****Insurance Company Master****
 - Company name, empanelment details, preferred submission method (Portal / Email / Courier).
 - Contact persons and remarks.
 - TAT (Turn Around Time) norms.
- ****Department Master**** (flexible)
 - Pharmacy, Laboratory, Radiology, and other user-defined departments.

4.2 Patient & Claim Registration

- Register new claim with patient details, insurance policy information, and company.
- Upload supporting documents (with date and remarks).
- Option to mark claim as Cashless or Reimbursement.

4.3 Cashless Claims Workflow

1. ****Pre-Authorization Stage****

- Record pre-auth request date and documents sent.
- Status: Pending / Approved / Rejected.
- Amount approved (if any).
- Reconsideration workflow with remarks.

2. ****Discharge & Final Approval Stage****

- Enter final hospital bill.
- Department-wise breakup (Hospital charges, Pharmacy, Lab, Radiology, Others).
- Send for final approval.
- Status: Approved / Rejected with reason.

3. ****Settlement Stage****

- Record settlement details: Approved amount, Hospital Discount, TDS, Deductions.
- Net payable by insurance.
- Settlement method used (Portal / Email / Courier).
- For Courier: Dispatch date, tracking reference, expected delivery.

4. ****Department Settlement****

- Allocate and record amounts payable to Pharmacy, Laboratory, Radiology, and other departments.

5. ****Patient Deposit Management****

- Record deposit collected.

- Refund amount calculation.
- Refund mode (Cash / Online).
- Schedule patient visit for refund.
- Mark deposit returned and close claim.

4.4 Reimbursement Claims Module

- Record patient queries and additional documents requested by company.
- Track hospital response timeline and documents provided.
- Follow-up history with dates and remarks.
- Final settlement recording.

4.5 Alerts & Dashboard

- ****Real-time Dashboard**** for Admin showing:
 - Pending Pre-Auth
 - Pending Final Approval
 - Pending Settlements
 - Delayed Couriers (>45 days and >60 days)
 - Deposit refunds pending
 - Over-deduction / Under-deduction alerts (Red / Yellow)
- ****System Alerts**** (in-app):
 - Automatic alerts on Admin dashboard for courier delays.
 - Mismatch between settlement amount and patient deposit.

4.6 Document Management

- Secure upload and storage of all claim-related documents.
- Version history and search functionality.

4.7 Reports

The system shall generate the following reports in both ****PDF (with hospital logo and template)**** and ****Excel**** formats:

- Patient-wise Claim Summary
- Insurance Company-wise Performance Report
- Monthly Claims Report
- Financial Year-wise Claims Report
- Department-wise Settlement Report (Pharmacy, Lab, Radiology, etc.)
- Discount, TDS & Deduction Analysis
- Pending Claims Ageing Report
- Claim Rejection Analysis Report
- Deposit Refund Status Report

All reports shall support filters by date range, insurance company, department, and status.

5. Non-Functional Requirements

****5.1 Performance****

- System should support at least 10 concurrent users.
- Page load time < 2 seconds.

- Report generation within 10 seconds for normal filters.

****5.2 Security****

- Role-based access control.
- Password policy and session management.
- Audit log for all critical actions (who changed what and when).
- Data encryption for sensitive fields.

****5.3 Usability****

- Intuitive, user-friendly interface.
- Minimal training required for staff.

****5.4 Reliability & Availability****

- Data backup capability.
- 99% uptime during hospital working hours.

****5.5 Scalability****

- Design should support increase in number of users, claims, and insurance companies.

6. Assumptions & Dependencies

- Hospital will provide necessary hardware/server and internet connectivity.
- Staff will be available for user acceptance testing.
- All insurance-related communication (portal/email/courier) will continue to be handled manually by staff; the system will only track the status.

7. Future Enhancement (Not in Phase 1)

- Advanced analytics and graphical dashboards.
- Bulk document upload.
- More granular staff permissions.

This SRS covers all the requirements discussed. It provides a clean, professional, and fully traceable system that solves the current operational challenges.
